

1  
26. (Amended) An image reproducing apparatus capable of displaying an image on a object, picked up by a camera and stored together with angle formation of the camera, on a display device, comprising:

a reproducing device to reproduce a plurality of images picked up by the camera, on the display device; and

a reproducing control device to control reproduction by said reproducing device so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in said storage device.

2  
27. (Amended) An apparatus according to claim 26, further comprising a detecting device to detect a direction of the camera and generate the direction information of the camera.

3  
28. (Amended) An apparatus according to claim 26, wherein the angle information of the camera, which is to be stored in said storage device together with the plurality of images, is information as to an angle where the camera is angled when the respective images to be stored in said storage device are picked up.

4  
29. (Amended) An image reproducing method of displaying an image of an object, picked up by a camera and stored together with angle information of the camera, on a display device, comprising the steps of:
